The Dlink DIR-615 router is considered a wireless router because it offers a WiFi connection. Allows you to connect a variety of devices to your router, such as WiFi or only wireless, wireless printers, smart TDs, and WiFi-enabled smartphones. Other Dlink DIR-615 Guides have a bit of background information on WiFi Terms that we should be familiar with before we begin. Your wireless network must have a name to uniquely identify it from other wireless networks. If you're not sure what that means, we have a guide explaining what the wireless name is and you can read it for more information. Wireless Password An important part of securing your wireless network is choosing a strong password. Choosing a Wireless Channel WiFi channel is not always a simple task. Be sure to read about WiFi channels before making a selection. Encryption You should almost certainly select WPA2 for encrypting networks. If you're not sure, be sure to read our WEP vs WPA guide first. Login to Dlink DIR-615 You need to log in to your router to start configuring Dlink DIR-615 WiFi settings. You can skip this step if you are already logged on. Follow the Dlink DIR-615 Login Guide to log in to the Dlink DIR-615. Find Dlink DIR-615 WiFi Settings If you've followed our login guide above, you should see this screen. Starting on the INTERNET CONNECTION page of the Dlink DIR-615 router, click the link in the left sidebar labeled wireless settings. Change the Dlink DIR-615 WiFi Settings now you should be on a page similar to what you see here. You may need to click the button at the bottom of the page labeled Manual Wireless Configuration first. First, you must change the Wireless Network Name. This is the name you give your wireless network so that you can distinguish it from other networks around you. Be creative but try to avoid personal information. To learn more about this topic, click this link to read our guide. If you want to change the Wireless Channel, you must first open the box marked Enable Auto Channel Tone. Then use the pull list next to Wireless Channel and select the channel you want to use, make sure it's channel 1.6 or 11. To find out why you should use one of these channels, click this link to read the guide on WiFi channels. Then, find Security Mode. Use this pop-up menu to select WPA-Personal. To learn more about security option differences, read our guide WEP vs. WPA. In wpa, use the WPA Mode pop-up menu to select only the safest option for WPA2. The last thing you need to change is the Pre-Shared Key. This is the password you use to access your network. We recommend using at least 14-20 characters in your password with a mixture of letters, numbers, and symbols. To learn more about this topic Read our Password Selection guide. All that's left is to click the Save Settings button at the top. click. Potential Problems Changing Your WiFi Settings After you make these changes to your Router, you will need to reconnect previously connected devices. This is usually done on your computer, not the device itself. Please note that other Dlink DIR-615 Information about other Dlink DIR-615 information you may be interested in. More Patrick Colford November 08, 2016 11:26 AM See more Patrick Colford Updates 11:26 If you are trying to configure a D-Link router, pay attention to your computer's Default Gateway IP address. The default Gateway is the IP address of the D-Link router. By default, it must be 192.168.0.1. Most D-Link devices use the range 192.168.0.X. [D-Link Support] Need help finding your default Gateway address? Note: If you haven't changed the original settings, the default user name is administrator and the password is blank (nothing). If for some reason you want to go back to your old settings, please type your current DNS settings before moving to.opendns. OpenDNS addresses are: 208.67.222.222 208.67.220.220 Note: To enable these configurable DNS fields, you may need to disable the 'Enable Advanced DNS' feature on the same configuration page.
